

ALPS gateway 

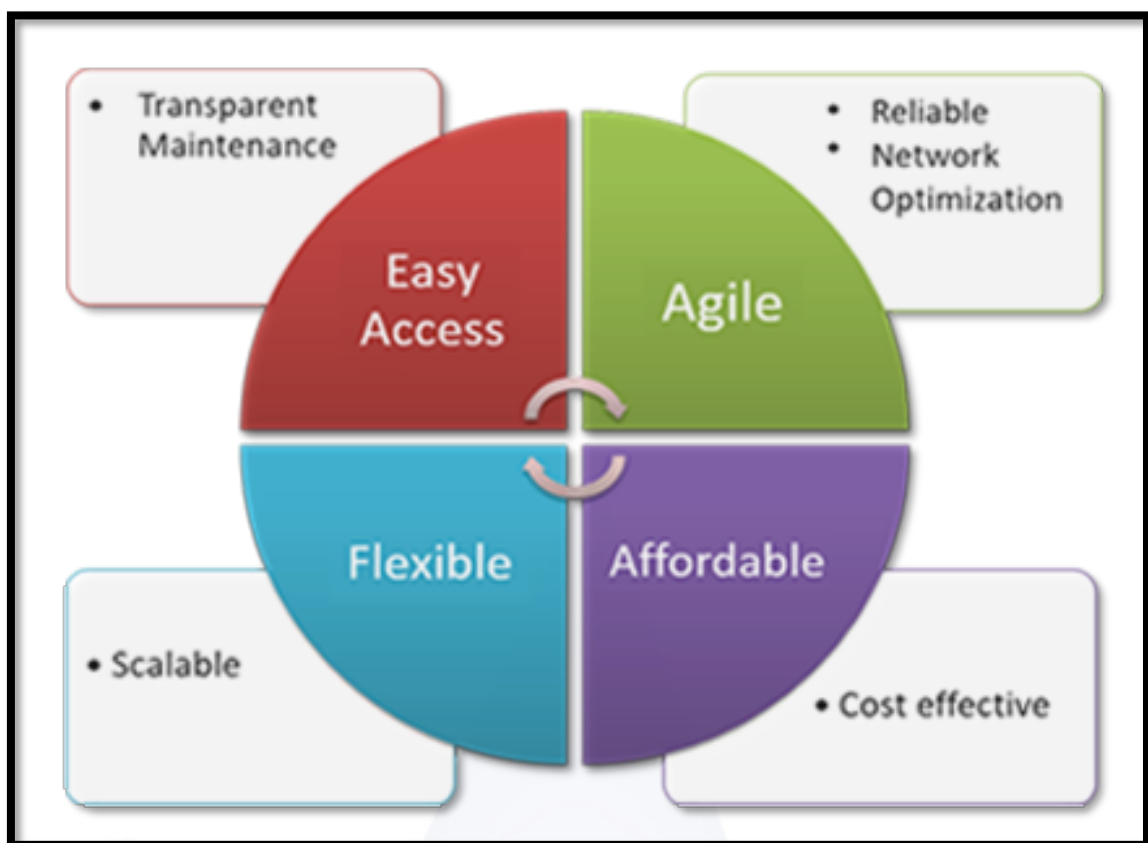

SUMMIT TO
LIMITLESS
CONNECTIVITY

THE GATEWAY

Facing increasingly high and sophisticated demands that require much more bandwidth and secured Internet Access in the business units or entity?

ALPS gateway offers an effective way to manage the IP Network ecosystems within a business entity or an organisation. This solution manages and ensures a fair share of the Internet bandwidth and Local Area Network (LAN) to authorised clients and users connected to the network.

Unique authorised data and information collected enables the operator to improve the user experience and cope with any issues faced during the usage of the service.

STANDARD FEATURES

- **Plug and Play supports**

- Dynamic IP settings
- Static IP settings
- Proxy IP Settings
- VLANs settings

- **Bandwidth Management**

- Locations Zoning / VLAN grouping
- Profile
- Plans

- **Automatic Systems Identifier**

- Auto-detect OS of user device
- Auto-detect type of user device

- **Multiple Authentications methods**

- Groups/Departmental user setup
- Device Access Management
- Social Media Logins

[Facebook | Google | Twitter | Instagram | LinkedIn]

- **ALPS SeCure**

- MAC Filtering
- Keywords Filtering
- Website Filtering

- **WAN prioritization** (Load-Balancing)

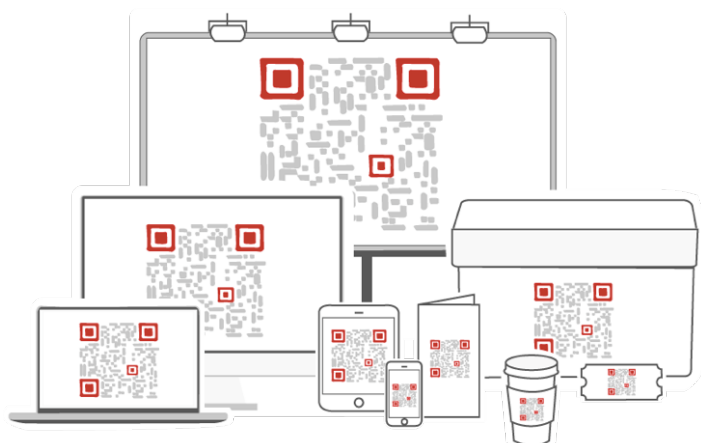

- **Flexible Billing Module** - Support Post and Pre-paid billing schemes, i.e.

- Time Based (Minute, Hourly, Daily, Monthly and Yearly)
- Packet based (Amount of data transferred)

Keep track of the number of user visits and summarize the data for marketing references
- **3rd Party Firewall Integration (optional)**
Seamless integration with 3rd party firewall SSL security certificates to enhanced security features and enhanced build-in Firewall system
- **QR Code generator (Optional)**
Built in QR code generator that allows user to scan and redirected to specific required Portal Page or Websites.
- **Wi-Finder (Optional)**
Generates QR Code that enables user to scan and connected to Wi-Fi SSID both for password protected and open SSID

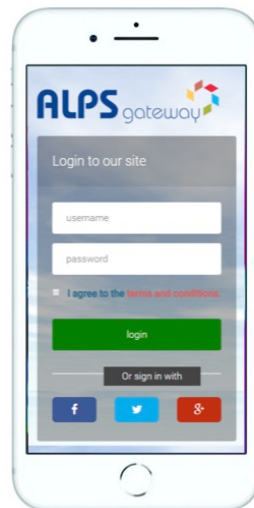

CUSTOM RESPONSIVE CAPTIVE PORTAL

a) Tablet or Notebook screen

b) Mobile screen

APPLICATIONS

One of our major concerns during development of ALPS Gateway is the consideration for a one-size-fits-all solution for internet connectivity and management solutions. While that is unheard of and is almost impossible, ALPS Gateway was designed to find its place in any organization or business with minimal modification or configuration needed.

ALPS Gateway can be utilised in different types of environments such as schools, hotels, business organizations, hospitals, entertainment centers (Game centers, Cinema) to community centers, office buildings as well as residential areas.

While the increase in Internet speeds and stability of performance in recent years may entice the users, there are still multiple hurdles to overcome and it is essential that the system is user friendly and hassle free.
